Noted thanks Brian,

I note that HSMU reports on file (near the very end of the full interpose file) make reference to the fact that reflect that some audio recordings are missing. This info might even be at the end of the last SML and I think it made reference to the missing audion recording numbers.

I hope that you really have located same. In any event you are off to a flying start.

Good luck

SG

Steve

I have located a CD folder with all relevant SDU recordings saved on CDs since inception in 2004 until Dec 2011. It appears that the folder is complete with no months missing. I would think all contact recordings would be contained within however my laptop cannot read either the folders and files.

Regards
Brian
